

Composite Asset Reliability for Offshore Oil & Gas Production

**~230,000 barrels worth
\$50M/day at risk**

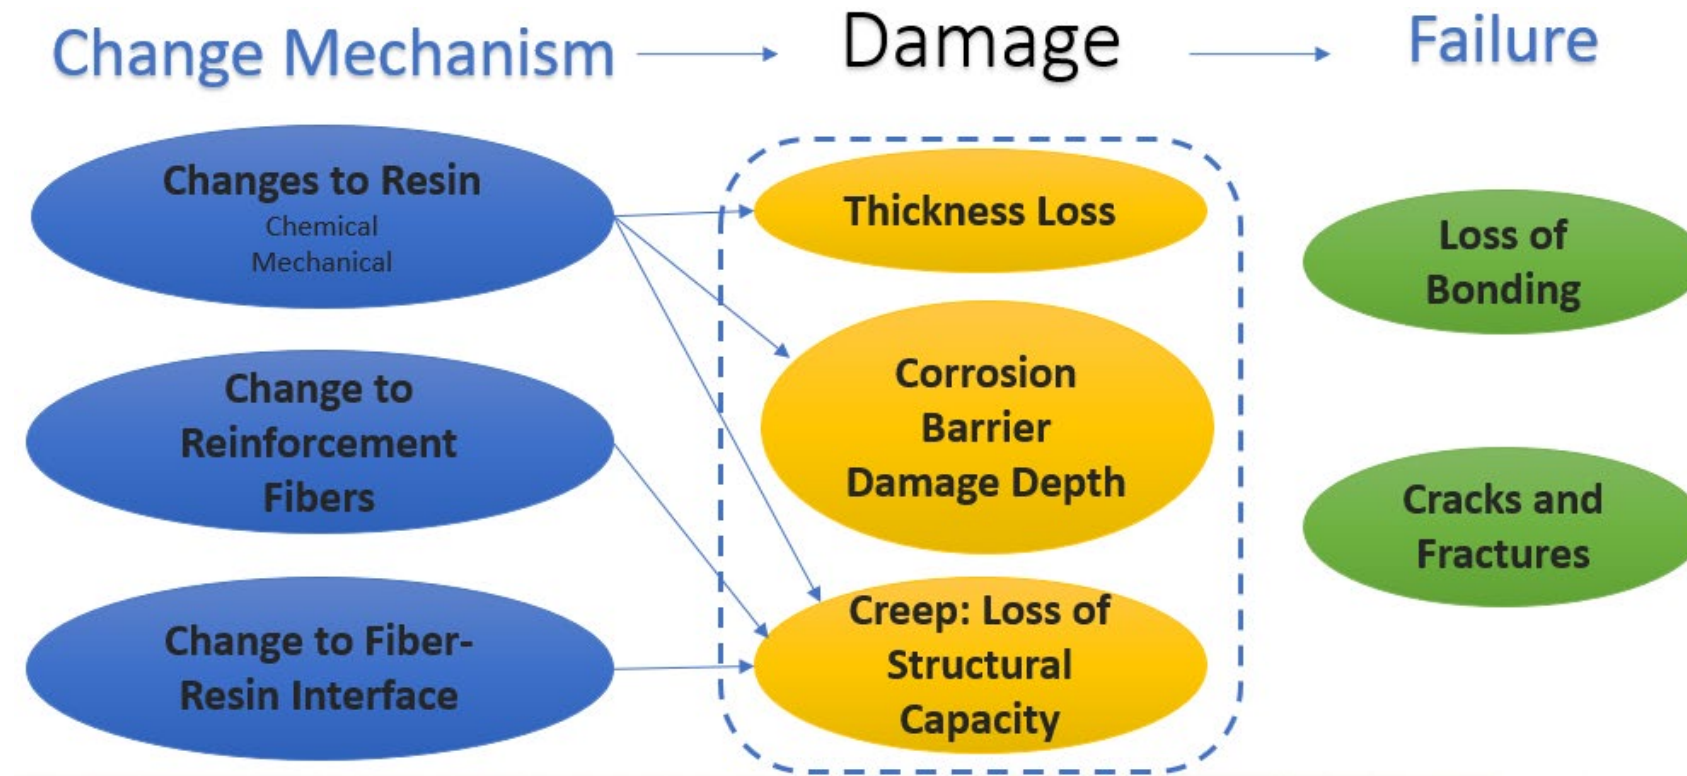

About UltraAnalytix

- All types of composites
- Pipes, structures, tanks and more
- Non-destructive, non-intrusive inspection
- Proprietary algorithm interprets data
- Results within 24 hours

Evidence-based decisions and proactive service-life forecasting

How UltraAnalytix works

Patented algorithm tracks changes over time that lead to failure

Proven Results

- UltraAnalytix performed as well as destructive tests in studies by leading universities and with more than 500 customers.
- UTComp is currently following 3000+ assets globally.
- Composite equipment tested by UTComp has never experienced a failure that wasn't previously identified and recommended for remediation.

Return on Investment

- Accurate service-life forecasting ensures maximum return on composite assets and reduces capital expenditures while maintaining safe operations
- No downtime for inspections also reduces operating costs – so you can continue to safely produce as much as possible, as fast as possible.

Working with UTComp

- Full spectrum composite engineering & inspection services:
 - Design & specification
 - Material selection & evaluation
 - Mechanical integrity programs
 - Quality control & risk management

Composite Asset Intelligence You Can Count On
