Kings Lynn, Norfolk, PE33 9AS
United Kingdom

Contact: Melvyn Jupp

Phone: +44 (0)1366 389699

Email: sales@tankinspections.co.uk

Tank Inspections Ltd was set up as a branch of Forbes Technologies Ltd, one of the UK's leading manufacturers of GRP tanks, to deal with GRP tank inspections. They are a relatively new Company but can tap into more than 50 years' experience in the tanks industry offered by Forbes personnel.

Forbes was receiving many requests for inspection services. They were happy to conduct inspections on their own tanks, but not tanks manufactured by others (due to liability reasons). This was the seed for the development of an independent inspection company.

Tank Inspections existence was born out of listening to their customers and addressing their desire for an independent, reliable and repeatable inspection method.

Thorough inspections based on manufacturing experience in the field is what truly sets them apart from other competitors.

Prior to UltraAnalytix™, GRP tanks had to be drained down in order to conduct an inspection. This was obviously very costly for the customer and made it difficult to do on any crucial tanks in a process. Off-putting as this was, it also adversely effected regular inspections that needed to be carried out. The UltraAnalytix™ inspection system, including a detailed external visual inspection, offers solutions to these issues that were very appealing to many of their customers, along with the detailed mechanical integrity report received after inspection.

Tank Inspections highly recommends regular UltraAnalytix™ inspections as a vital part of any maintenance routine. It is easier and more cost effective for the customer due to the benefits that the UltraAnalytix™ inspection system can offer. To know you have sound equipment in operation is peace of mind.

Tank Inspections Ltd continues to grow as a company and assist with their customers in implementing regular inspection protocol on sites across the UK.

Contact Tank Inspections for your FRP/GRP needs in the UK.
